ABSTRACT

Assessment is important to the continuous improvement of education. Recently, ABET has changed the standards for Information Systems accreditation to be more assessment oriented. This panel discussion will discuss the Center for Computing Education Research's IS Assessment test. This test is based on the IS2002 model curriculum and is an excellent assessment tool that can be used for accreditation. The panelists are all experienced in IS assessment, the CCER assessment test, and in accreditation. They will give real life experiences from campuses that have implemented this assessment tool.
